

Global Social Leaders - Project Feedback

Project Name: Mr. Segregator

Waste Segregation from Pathways School | 2025/2026,

Thank you for your GSL Project Feedback Survey.

We have now reviewed your submission and have enclosed our feedback on your project.

Project Name

Mr. Segregator

Which SDG/Global Goals does your project focus on?

GOAL 11: Sustainable Cities and Communities, GOAL 12: Responsible Consumption and Production

What have you done so far?

The problem I have chosen is waste segregation and I have chosen it because when I came to India I saw that the quality of waste segregation was very poor and this affected me deeply. I have done some research. The problem mainly affects sanitation workers, us people and animals in the ocean and land. So far I have raised awareness through articles in magazines, collaborating with an NGO doing a waste segregation quiz, and have almost completed a model of a smart dustbin that segregates waste into Recyclable waste and Organic waste. In the future I look forward to make the dustbin segregate into 4 streams of waste segregation.

What are you planning to do next?

I am making a website that will help people segregate waste, have created a waste segregation game, making bags with messages on how to segregate waste, and am using a book called Greening Your School to do a survey on how the school segregates waste at source and etc. I am collaborating with Shorr Kar Yaar and an NGO to do another Waste segregation Quiz.

What challenges are you having?

I am finding it kind of hard to get the Smart Trash Can to work, and could use help from my dad and the person helped print my 3d Trash can.

Our Feedback On Your Submission

Your submission has been reviewed on behalf of the Global Social Leaders team by our Global Goal Heroes.

Your project sounds great because...

Such a creative project!

I like the way you approached the issue of waste segregation, finding different ways to raise awareness—writing magazine articles, and creating a waste segregation quiz!

You have began you project with work around education and raising awareness which is key to drawing attention to a problem.

You have also developed partnerships that will be important to maintain as you continue to grow your project.

Your idea to design a smart dustbin that automatically segregates waste is fantastic. This shows original thinking, strong imagination, and a willingness to experiment with technology to solve a real-world issue. Not many students choose such an inventive solution, and it shows that you think beyond the basics and explore new possibilities.

This is a great start to your project and a good foundation to continue to raise awareness and have an impact.

Your project would be even better if...

Waste segregation can be quite a complex problem, and I would urge the team to consider the upstream and downstream aspects of waste and recycling. Considering more behavioural nudges / policy pushes / new methods to segregate waste effectively / how to translate knowledge into action might need to go hand-in-hand.

Most people don't segregate waste out of convenience and waste is typically out of sight/out of mind after the bin. Segregation does have downstream benefits, but burdensome upstream. Continuing with education is going to be key in changing this and people's attitudes towards segregation.

It would be good to have some data to back up your research and problem analysis and to create an action plan with small steps and individual goals which will enable you to track your project and measure the impact you are having as you work through your project.

It sounds like this is an individual project. Are you working in a team? It's important to share how you have been supported by others and how roles have been allocated in the project.

Finally, plan for sustainability. Can your website be maintained long-term? Can your awareness bags be reproduced by others? Can the school adopt your dustbin system?

You have good ideas and now need to plot these carefully into a plan which will allow you to move forward with your project and have a lasting impact.

Areas of Feedback Recommended by Your GSL Hero

Measuring Impact

It is essential that you can track the impact you are making within your community based on the issue that your project is addressing as part of the GSL journey.

Why?

- Important to know when a project is successful or not
- Important to tell the story of change/impact made – to GSL, supporters, funder etc.
- Informs further planning and adjustment
- Track record of success further spreads good success
- Understanding underperforming initiatives enables us to improve on them

As part of planning to measure the impact of your project, we recommend going through the following questions to guide you through this process:

- Define your key project activities
- What is the immediate benefit of the activities that you run?
- How is it impacting the lives and/or livelihoods of the community that you are supporting?
- How is it impacting the environment in your community?
- What evidence do you have to show the impact that the project had had? (Images, videos, testimonials, audio recording etc)

There are also a few helpful resources that can help you to work through how you could measure the impact throughout the project. We have shared some examples below:

- Theory of Change - [DIY Toolkit | Theory Of Change - YouTube](#)
- 5 Whys - [The 5 Whys - An Introduction - YouTube](#)
- [learning-handbook-five-whys.pdf \(england.nhs.uk\)](#)

Partnerships

When looking to have an impact on your community, it is important that you better understand the issue that is being addressed and which key people and/or organisations in the community are leading to address this. This creates an opportunity to explore collaboration and designing a solution that is informed by experience.

When forming key partnerships as part of your project, consider how their values align with your project aims, how they can support your project and help raise awareness about it within the community and what they are looking to achieve through this partnership. It is important to create a **partnership agreement (also known as 'Memorandum of Understanding')**, where it is clearly outlined what communication would look like (via email and how regularly), how they will be supporting you on the project and what the partnership involves (such as project activities).

Ensure that communication with partners is consistent and that there is a team member in the project that is leading this area, as having a key point of contact is important to ensure that consistency.

Teamwork and Dynamics

Ensure that you have divided the roles between yourselves and that each team member is aware of the key tasks that they are responsible for within the team. This should positively affect how you communicate with each other and ensure that everyone stays accountable for their part of the project.

You may want to put in some timelines and milestones as this will allow you to measure your success and achievements. It will also keep up momentum and support with planning ahead if any challenges arise. Consider having **SMART goals**, so that you know exactly what small steps you're going to take (Specific) and you know what success in each of these small steps looks like (Measurable), ensure the steps are small enough to achieve (Achievable), ensure what you are doing is always relevant to your aims (Relevant) and put a time by which to have achieved each small step into your plan (Time).

You may want to think about the issue of privacy and ensure that the space where you will have these discussions are confidential and protects the group members in the session. It is important to ensure that there is a safe space to share

any project related concerns, challenges, and key information.

Team Building activities are also a fantastic way to build a positive team culture that support with strengthening communication amongst each team member. This could include team lunch, ice breaker games or outdoor activities. The latest may count the virtual team-building exercises to create good team dynamics define among those that cannot attend team meetings in person.

We recommend prioritising time for reflection and wellbeing whilst the team work throughout the project. This provides a space for team members to talk through their personal development journey and how they are feeling. For example, you could introduce a '**team check in**' before each meeting begins to simply talk about how everyone is doing/what they are looking forward to within the week.

Thank you so much for your project submission. We are so excited that you are taking action to help address the Global Goals. We are so inspired by our young social change makers.

Would you like us to promote your team's efforts?

- [Write a blog for our website](#)! This is a great way to raise the profile of your project and gain supporters from your school and local community. Once we publish it officially on our GSL website you and your school can share the blog on your socials, and we will share it on ours.

Or

- [Submit a summary of your project](#) to be featured in our monthly **Feel Good Friday newsletter**.

Good luck with your next steps and please do keep in touch with us.

You can contact our team by emailing: social.leaders@future-foundations.co.uk

You can also ask a question or live chat with us on our website [click here](#)

Many thanks again for your project submission. We hope this feedback is useful and helps you going forward from here.

We are looking forward to hearing how your project develops.
